

Bug Report

Bug ID: BR-001

Title: Incorrect balance Value When Adding New Contact Using POST API

Priority: High

Severity: Major

Bug Description

The bug occurs when using the POST API endpoint for creating new contact entries. Despite specifying a value for the balance field in the request payload (e.g., balance: 0), the API response always returns balance: 1. This behavior contradicts the expected functionality outlined in the contact creation instructions.

Environment:

- **OS:** Windows 11
- **Browser:** Chrome 131
- **API Testing Tool:** Swagger UI v1
- **Endpoint:** POST /api/Contacts

Steps to Reproduce:

1. Navigate to [API Link](#)
2. Use the login endpoint to login and obtain a token so you can start testing.
3. Click on POST request to the /api/Contacts endpoint.
4. Click on Try it out and add any acceptable value for balance and other fields.
5. Execute the API request.

Expected Result: The contact should be added successfully, and the balance value should match the request body.

Actual Result: The balance value is consistently returned as 1, regardless of the value sent in the request body, which contradicts the instructions for contact creation.
