

TestCase#	Test Scenario	Test Cases	Test Steps	Test Data	Expected Result	Actual Result	Pass/Fail
T4	Verify that the system doesn't allow numbers in Customer Name field.	Validate the system behavior if the User enter numbers in Customer Name field.	1- Navigate to the "New Customer" form. 2- In Customer Name field , try to enter numbers.	Like : 12345, 011245	- the system doesn't accept the data and show error message for user (Numbers are not allowed) - The user is prevented from proceeding until the issue is corrected.		
T5	Verify that the system doesn't allow special characters in Customer Name field.	Validate the system behavior if the User enter special characters in Customer Name field.	1-Navigate to the "New Customer" form. 2- In Customer Name field , try to enter special characters	Like : amed#@	- the system doesn't accept the data and show error message for user (Special characters are not allowed) - The user is prevented from proceeding until the issue is corrected.		
T6	Verify that the system does not accept a blank value in the Customer Name field.	Validate the system behavior if the User left the Customer Name field empty .	1- Navigate to the "New Customer" form. 2- In Customer Name field , left it blank.	" "	- the system shows error message ( Customer name must not be blank ) - The user is prevented from proceeding until the issue is corrected.		
T7	Verify that the system does not allow the Customer Name field to start with a space.	Validate the system behavior when the first character of the Customer Name field is a space.	1- Navigate to the "New Customer" form. 2- In Customer Name field , enter a value starting with space.	" Mahmoud Saber"	- the system shows error message ( Customer Name field cannot start with space ) - The user is prevented from proceeding until the issue is corrected.		
T8	Verify that the system does not accept a blank value in the Address field.	Validate the system behavior if the User left the Address field empty .	1- Navigate to the "New Customer" form. 2- In Address field , left it blank.	" "	- the system shows error message ( Address Field must not be blank ) - The user is prevented from proceeding until the issue is corrected.		
T9	Verify that the system does not allow the Address field to start with a space.	Validate the system behavior if the Address field starts with space.	1- Navigate to the "New Customer" form. 2- In Address field , Enter a value starting with space.	" Egypt"	- the system shows error message ( Address field cannot start with space ) - The user is prevented from proceeding until the issue is corrected.		
T10	Verify that the system doesn't allow special characters in Address field.	Validate the system behavior if the User enter special characters in Address field.	1- Navigate to the "New Customer" form. 2- In Address field , try to enter special characters.	"Car@o#"	- the system shows error message ( Special characters are not allowed ) - The user is prevented from proceeding until the issue is corrected.		
T11	Verify that the system doesn't allow special characters in City field.	Validate the system behavior if the User enter special characters in City field.	1- Navigate to the "New Customer" form. 2- In City field , try to enter special characters.	" London"	- the system shows error message ( Special characters are not allowed ) - The user is prevented from proceeding until the issue is corrected.		
T12	Verify that the system does not accept a blank value in the City field.	Validate the system behavior if the User left the City field empty .	1- Navigate to the "New Customer" form. 2- In City field , left it blank.	" "	- the system shows error message ( City name must not be blank ) - The user is prevented from proceeding until the issue is corrected.		
T13	Verify that the system doesn't allow number in City field.	Validate the system behavior if the User enter numbers in City field.	1- Navigate to the "New Customer" form. 2- In City field , try to enter numbers.	Like : 12345, 011245	- the system doesn't accept the data and show error message for user (Numbers are not allowed) - The user is prevented from proceeding until the issue is corrected.		
T14	Verify that the system does not allow the City field to start with a space.	Validate the system behavior when the first character of the City field is a space.	1- Navigate to the "New Customer" form. 2- In City field , enter a value starting with space.	" New York"	- the system shows error message ( City name cannot start with space ) - The user is prevented from proceeding until the issue is corrected.		
T15	Verify that the system doesn't allow numbers in State field.	Validate the system behavior if the User enter numbers in State field.	1- Navigate to the "New Customer" form. 2- In State field , try to enter numbers.	Like : 12345, 011245	- the system doesn't accept the data and show error message for user (Numbers are not allowed) - The user is prevented from proceeding until the issue is corrected.		
T16	Verify that the system does not accept a blank value in the State field.	Validate the system behavior if the User left the State field empty .	1- Navigate to the "New Customer" form. 2- In State field , left it blank.	" "	- the system shows error message ( State name must not be blank ) - The user is prevented from proceeding until the issue is corrected.		
T17	Verify that the system doesn't allow special characters in State field.	Validate the system behavior if the User enter special characters in State field.	1- Navigate to the "New Customer" form. 2- In State field , try to enter special characters.	"@Alaska"	- the system shows error message ( Special characters are not allowed ) - The user is prevented from proceeding until the issue is corrected.		
T17.1	Verify that the system does not allow the State field to start with a space.	Validate the system behavior if the State field starts with space.	1- Navigate to the "New Customer" form. 2- In State field , Enter a value starting with space.	" Egypt"	- the system shows error message ( State field cannot start with space ) - The user is prevented from proceeding until the issue is corrected.		
T18	Verify that the system doesn't allow characters in Pin field.	Validate the system behavior if the User enter characters in Pin field.	1- Navigate to the "New Customer" form. 2- In Pin field , try to enter characters.	"12sd25g"	- the system doesn't accept the data and show error message for user (Characters are not allowed) - The user is prevented from proceeding until the issue is corrected.		
T19	Verify that the system does not accept a blank value in the Pin field.	Validate the system behavior if the User left the Pin field empty .	1- Navigate to the "New Customer" form. 2- In Pin field , left it blank.	" "	- the system shows error message ( Pin field must not be blank ) - The user is prevented from proceeding until the issue is corrected.		
T20	Verify that the system doesn't allow special characters in Pin field.	Validate the system behavior if the User enter special characters in Pin field.	1- Navigate to the "New Customer" form. 2- In Pin field , try to enter special characters.	"@12#35"	- the system shows error message ( Special characters are not allowed ) - The user is prevented from proceeding until the issue is corrected.		
T21	Verify that the system doesn't accept less than 6 digits in Pin field.	Validate the system behavior if the User enter less than 6 digits in Pin field.	1- Navigate to the "New Customer" form. 2- In Pin field , try to enter less than 6 digits.	"4455"	- the system shows error message ( PIN Code must have 6 Digits ) - The user is prevented from proceeding until the issue is corrected.		
T22	Verify that the system doesn't accept more than 6 digits in Pin field.	Validate the system behavior if the User enter more than 6 digits in Pin field.	1- Navigate to the "New Customer" form. 2- In Pin field , try to enter more than 6 digits.	"1234567890"	- the system shows error message ( PIN Code must have 6 Digits ) - The user is prevented from proceeding until the issue is corrected.		
T23	Verify that the system does not allow the Pin field to start with a space.	Validate the system behavior when the first number of the Pin is a space.	1- Navigate to the "New Customer" form. 2- In Pin field , enter a value starting with space.	" 885421"	- the system shows error message ( Pin code number cannot start with space ) - The user is prevented from proceeding until the issue is corrected.		

TestCase#	Test Scenario	Test Cases	Test Steps	Test Data	Expected Result	Actual Result	Pass/Fail
T24	Verify that the system does not accept a blank value in the Telephone Number field.	Validate the system behavior if the User left the Telephone Number field empty .	1- Navigate to the "New Customer" form. 2- In Telephone Number field , left it blank.	" "	- the system shows error message ( Mobile no must not be blank ) - The user is prevented from proceeding until the issue is corrected.		
T25	Verify that the system doesn't allow special characters in Telephone Number field.	Validate the system behavior if the User enter special characters in Telephone Number field.	1- Navigate to the "New Customer" form. 2- In Telephone Number field , try to enter special characters.	"@Alaska"	- the system shows error message ( Special characters are not allowed ) - The user is prevented from proceeding until the issue is corrected.		
T26	Verify that the system does not allow the Telephone Number field to start with a space.	Validate the system behavior if the Telephone Number field starts with space.	1- Navigate to the "New Customer" form. 2- In Telephone Number field , Enter a value starting with space.	" 01116602165"	- the system shows error message ( Telephone Number field cannot start with space ) - The user is prevented from proceeding until the issue is corrected.		
T27	Verify that the system does not accept a blank value in the Email field.	Validate the system behavior if the User left the Email field empty .	1- Navigate to the "New Customer" form. 2- In Email field , left it blank.	" "	- the system shows error message ( Email ID must not be blank ) - The user is prevented from proceeding until the issue is corrected.		
T28	Verify that the system validates and rejects invalid email addresses in the Email field.	Validate the system's response when an invalid email address is entered in the Email field.	1- Navigate to the "New Customer" form. 2- In Email field , Enter invalid Email value.	"example.com, user@.com, @example.com, user@example. user.. name@example. com, -user@example. com, user@example.123"	- the system shows error message (Email ID is not valid) - The user is prevented from proceeding until the issue is corrected.		
T29	Verify that the system does not allow the Email field to start with a space.	Validate the system behavior if the Email field starts with space.	1- Navigate to the "New Customer" form. 2- In Email field , Enter a value starting with space.	" user@gmail.com"	- the system shows error message ( Email field cannot start with space ) - The user is prevented from proceeding until the issue is corrected.
